PROFESSIONAL SUMMARY

Software Engineer with **5+ years** building software solutions end-to-end, from planning to production. I actively participate in **decision-making** and **architecture design with good judgment**, weighing trade-offs and thinking long-term. I write **scalable code that's easy to iterate on**. My most recent work: **data ingestion platform (legal-tech)** processing millions of events/day on Azure. I thrive on distributed teams and communicate professionally in English.

TECHNICAL SKILLS

Languages	C#, JavaScript / TypeScript, Python, SQL
Frameworks	.NET Core (6 / 8 / 9 / 10), ASP.NET Core, Entity Framework, React, Next.js, Express.js
Cloud / Azure	Azure Functions, Durable Functions, Event Hub, Queue Storage, Table Storage, Blob Storage, App Services, GCP, Firebase
Databases	SQL Server, PostgreSQL, MySQL, Firestore
Architecture	DDD, CQRS, event-driven architecture, microservices, multi-tenant SaaS, distributed systems
Frontend	React, Redux, Redux Toolkit Query, Ant Design, Tailwind, Vite, TanStack Table, PDF Renderer, charts
Testing	Vitest, React Testing Library, Playwright (E2E)
DevOps / Tools	GitHub Actions (CI/CD), .NET Aspire, Docker Compose, Podman, Linux (development and deployment environments), Git, Jira, Slack

PROFESSIONAL EXPERIENCE

Nexl (contract)
Software Engineer

Oct 2024 to Apr 2026 · 1 yr 7 mos
Full-time · English-speaking team

Data ingestion and management platform (legal-tech) syncing data from multiple enterprise systems into a data warehouse in near real time.

- Participated in **architecture design** and key technical decisions with the team (medallion, plugin model, streaming strategy).
- Near real-time streaming** with **Azure Event Hub**: millions of events/day into the data warehouse.
- Bidirectional ETL** (inbound and outbound) over a data warehouse with **medallion architecture**, executed by the plugin SDK.
- Designed an **SDK with a plugin architecture** letting other developers extend the system with new flows, validations and integrations.
- Engine that builds **dynamic tables and forms** from definition documents, cutting integration onboarding **from weeks to days**.
- Orchestrations with **Durable Functions**, **Queue** and **Table Storage**, with fault tolerance and retries.
- CI/CD with GitHub Actions** and collaboration on a distributed, English-speaking team.

Stack: C#, .NET 10, SQL Server, Azure Functions, Azure Durable Functions, Azure Event Hub, Azure Queue Storage, Azure Table Storage, Entity Framework, .NET Aspire, React, Medallion Architecture, GitHub Actions CI/CD, Clean Architecture.

Arosoft
Fullstack Developer (May 2024 to Nov 2024) · Frontend Developer (May 2021 to May 2024)

May 2021 to Nov 2024 · 3 yrs 6 mos

- Designed and built end-to-end **multi-tenant SaaS** applications (CRM, accounting, customs management) with **React** and **ASP.NET Core**, deployed to Azure.
- Frontend caching** strategy that reduced backend calls by approx. **50%** and improved perceived load times.
- Key CRM modules (customers, reports, calendar, real-time activity maps) and accounting modules (transactions, chart of accounts).
- Modular **authentication and authorization** components reused across multiple applications.
- Test coverage with **Playwright** (E2E) and **Vitest**, plus CI/CD with GitHub Actions to Azure.

Stack: React, TypeScript, .NET 6+, SQL Server, Azure, GCP, Firestore, GitHub Actions CI/CD, Clean Architecture, CQRS.

EDUCATION

B.Sc. in Computer Science / Systems Engineering · Universidad Nacional Autónoma de Honduras (UNAH), Copán · Since 2021 · expected graduation Dec 2026

LANGUAGES

Spanish	Native
English	Upper-intermediate (B2) · Daily professional communication on an international team
