

Erick Marley Arita Orellana

Software Engineer

Santa Rosa de Copán, Honduras · GMT-6 · erick.emao@gmail.com · [linkedin.com/in/erickarita](https://www.linkedin.com/in/erickarita) · github.com/erickArita · convercia.app

PROFESSIONAL SUMMARY

Software Engineer with **5+ years** building software solutions end-to-end, from planning to production. I actively participate in **decision-making** and **architecture design with good judgment**, weighing trade-offs and thinking long-term. I write **scalable code that's easy to iterate on**. My most recent work: **data ingestion platform (legal-tech)** processing millions of events/day on Azure. I thrive on distributed teams and communicate professionally in English.

TECHNICAL SKILLS

Languages	C#, JavaScript / TypeScript, Python, SQL
Frameworks	.NET Core (6 / 8 / 9 / 10), ASP.NET Core, Entity Framework, React, Next.js, Express.js
Cloud / Azure	Azure Functions, Durable Functions, Event Hub, Queue Storage, Table Storage, Blob Storage, App Services, GCP, Firebase
Databases	SQL Server, PostgreSQL, MySQL, Firestore
Architecture	DDD, CQRS, event-driven architecture, microservices, multi-tenant SaaS, distributed systems
Frontend	React, Redux, Redux Toolkit Query, Ant Design, Tailwind, Vite, TanStack Table, PDF Renderer, charts
Testing	Vitest, React Testing Library, Playwright (E2E)
DevOps / Tools	GitHub Actions (CI/CD), .NET Aspire, Docker Compose, Podman, Linux (development and deployment environments), Git, Jira, Slack

PROFESSIONAL EXPERIENCE

Convercia (private beta)

Current

Founding Engineer

SaaS · LATAM

Ecommerce, AI and CRM platform that automates sales and customer conversations through WhatsApp for online stores.

- Build end-to-end a SaaS platform for ecommerce, CRM and AI with catalog, inventory and order management.
- Integrated **WhatsApp Cloud API** for sales conversations, product recommendations and abandoned-cart recovery.

Stack: Next.js, React, Python, WhatsApp Cloud API, AI agents, SaaS

Nexl (contract)

Oct 2024 to Apr 2026 · 1 yr 7 mos

Software Engineer

Full-time · English-speaking team

Data ingestion and management platform (legal-tech) syncing data from multiple enterprise systems into a data warehouse in near real time.

- Implemented the **data warehouse** and bidirectional ETL for a near-real-time ingestion platform processing **millions of events/day**.
- Designed a **plugin SDK from scratch** to extend integrations, validations and data workflows.
- Implemented and validated in staging an ETL capable of exporting **gigabytes of data**; proposed changes later deployed to production by DevOps with Terraform.
- Developed the MVP with **.NET Aspire**, Azure Functions/Durable Functions, Event Hub, Queue/Table/Blob Storage, Azure SQL, App Service and Application Insights.
- Contributed to architecture decisions, medallion/streaming strategy and GitHub Actions CI/CD.

Stack: C#, .NET 10, SQL Server, Azure Functions, Azure Durable Functions, Azure Event Hub, Azure Queue/Table/Blob Storage, Azure SQL, App Service, Application Insights, Entity Framework, .NET Aspire, Terraform, React, Medallion Architecture, GitHub Actions CI/CD, Clean Architecture.

Arosoft

May 2021 to Nov 2024 · 3 yrs 6 mos

Fullstack Developer (May 2024 to Nov 2024) · Frontend Developer (May 2021 to May 2024)

Multi-tenant **SaaS** applications for CRM, accounting and customs management built end-to-end with React, ASP.NET Core and SQL Server.

- Started as a frontend developer and transitioned to backend/full-stack development with **C#, ASP.NET Core/.NET 6+, REST APIs, Entity Framework Core** and SQL Server.
- Built from scratch the customer activity-tracking module covering prospects, conversion to customers, analytics, notifications and reminders.
- Developed APIs for a multi-tenant accounting ERP and the monetary transaction module based on **double-entry bookkeeping**, reviewed by an accountant.
- Implemented **RBAC** permissions, authentication with **Auth0/FusionAuth** and executive reports; worked directly with the Product Owner and customers.
- Implemented frontend caching that reduced backend calls by approx. **50%**; contributed to E2E testing and CI/CD to Azure.

Stack: React, TypeScript, C#, ASP.NET Core/.NET 6+, REST APIs, Entity Framework Core, SQL Server, Azure, Auth0, FusionAuth, OAuth, RBAC, GCP, Firestore, GitHub Actions CI/CD, Clean Architecture, CQRS.

EDUCATION

B.Sc. in Computer Science / Systems Engineering · Universidad Nacional Autónoma de Honduras (UNAH), Copán · Since 2021 · in progress, expected graduation Dec 2026

Technical High School Diploma in Computer Science · completed
